## Declaration of allergens

All our malt types are manufactured by using various types of grain (barley, wheat, spelt) containing gluten. Our malt, therefore, also contains the **allergen gluten**.

Furthermore, according to HACCP-system requirements it is recommended and technically necessary that our malts undergo sulfuric treatment in order to avoid N-nitrosodimethylamine (M-8330-ADD-40). It can, therefore, not be excluded that sulfur dioxide content exceeds 10 mg per kg of malt. As a consequence, the **allergen sulfur dioxide** must also be considered present in our malts.
